

Methodology

How OnCall Learning Systems incorporates actual Meditech screens and routines into an automated solution that meets your training needs.

Training Options: OnCall Learning Systems offers three options designed to give you the most cost effective training solution for your requirements.

- Custom – Training created for your facility, using your screens and routines
- Semi-Custom – Generic lessons developed on your platform with your choice of screens added to emphasize training points of most importance for your environment
- Generic – Off-the-shelf training designed for your platform and offering the most cost effective Meditech education on the market.

Proposal

Let us know what your specific training needs are. We then select the best training option for you from our choices of custom, semi-custom or generic off-the-shelf training. Then we develop a proposal that lists the details of your custom-built CBT and its associated costs. Our proposal is offered without obligation and is available for your acceptance at the quoted price within 120 days of its presentation.

Information Gathering

You provide us with any training resources you currently use including outlines, manuals, exercises, Powerpoint presentations, etc. Then give us access to your VPN or dial up access to your test Meditech applications so that we can learn about the unique features of your applications.

Storyboarding

We develop "storyboards" to outline how we will deliver your content. The storyboards are rough sketches of how the lesson will eventually look. You can edit, add and delete content as you see fit. The storyboards are the collaborative architecture of your custom courseware.

Lesson Development

Using dial up or VPN access, we collect the screen shots that are necessary for building your tutorials. We create your lessons according to the storyboard layouts.

Editing

You review the completed lessons and offer any suggestions for changes. We make any changes you require and prepare your lessons for final delivery.

Implementation

We save your tutorials in the format you desire – for the web, LAN, CD, intranet network or internet education system delivery. We help you plan how you will roll out the training to your staff.
